

# mad

merging commits that branch off early in the project and do not rebase or merge into main before creating a PR

no communication within the css team, no one used the trello for task delegation, no one responded in the chat

Not too much communication in between different teams

# sad

that we couldn't use node or other runtimes to further improve our web app

json implementation was a bit confusing, documentation provided many different ways to read file and it was hard to pick one

The allotted time for this project is this short and we can't make a lot of improvements

couldn't get anyone to review my prs within my team (css)

(More about the assignment) If we had more time, we could have made the design even better but 1 week was rough.

i don't think i pushed things properly but luckily got help

# glad

Teams were proactive in completing their work by the deadline

all the teams finished everything on time, which makes the entire process much easier and less stressful

I'm glad that our team had great communication and was proactive in terms of getting work done

Design: Team worked quickly with good communication. Accomplished our goals.

responsibility of teams was really good, we achieved all the goals we have set, app turned out good.

improvements:

add git workflow to wiki

make smaller teams

communicate between teams more

github reviews guide

commenting and approving PRs
